Project Aim

Our aim is to create a food delivery website that allows customers to order their desired food online and receive it at their doorstep. The primary focus of the website is to serve as a platform for restaurants to showcase their menus and for users to browse, choose, and order food as per their liking.

Project Features

- User registration and login: Users can create an account and log in to the website to view the restaurants and place an order. Restaurants and couriers can also create an accounts to enjoy the features of picking up orders, editing information, etc.
- Menu display: Restaurants can display and change their menus with item details, prices, and images. Customers can add items to their cart and adjust quantities
- Order tracking: Customers can track the status of their orders from the time they place an order until it is delivered. Once delivered, customers can rate the order and the rating will reflect on the restaurant page
- Restaurant management: Restaurants can manage their menus, update item details and prices, and view orders received
- Customer Support: The customer can chat with restaurant in real time, and share their current location
